

# The Fourth Industrial Revolution (FIRe): Opportunities and Challenges for the Philippines

**Ramonette Serafica, Ph.D.**  
and  
**Jose Ramon G. Albert, Ph.D.**

**Bohol Tropics, Tagbilaran City, Bohol**  
**March 6, 2019**

# Agenda

## 1. Introduction

- Economic Growth and Technologically-Driven Progress
- What is the FIRE and its Frontier Technologies?
- Potential Impacts from FIRE Technologies

## 2. Innovation Ecosystem

- Readiness for Future Production
- Innovation Statistics

## 3. Gardening Innovation

- Preparing the Ground (Education)
- Nurturing the Soil (R&D)
- Watering the Ground (Support to Innovation)
- Others : Social Protection, Tax Reform, Whole of Nation Paradigm and Action Agenda

# 1. Technology and Progress

Since the 1960s, the Philippines has had booms and busts

- Starting 2012, PH economic performance even better than average in East-Asia and the world
- Negative growth in East Asia only in 1998, and across the world in 2009
- Buoyant expectations for global progress in the wake of the emerging Fourth Industrial Revolution (FIRE)

# 1. Technology & Progress (cont'd)

Fire

Agriculture

Wheel

Cities

Manufacturing & Trade

## History of Technological Progress

# 1.1. What is the Fourth Industrial Revolution (FIRe)?

First came steam and water power; then electricity and assembly lines; then computerization. Throughout history, we have improved industry by migrating from established production methods to utilizing cutting-edge technologies

## 1<sup>st</sup> Revolution

(1784)

Steam, water, mechanical production equipment

## 2<sup>nd</sup> Revolution

(1870)

Division of labor, electricity, mass production, assembly line

## 3<sup>rd</sup> Revolution

(1969)

Electronics, computers, internet, automated production

## 4<sup>th</sup> Revolution

(???)

Cyber-physical systems  
*“a fusion of technologies that is blurring the lines between the physical, digital and biological spheres.”* –Schwab (2016)

# 1.2. FIRe Frontier Technologies

identified by select organizations

(ESCAP, 2018)

- No universally agreed definition of frontier technology

- It shows that the following technologies have been most commonly identified as frontier: 3D printing, the Internet of Things, AI, and robotics

OECD	World Bank	World Economic Forum	McKinsey Global Institute	Institute of Development Studies	MIT Technology Review 2018
Internet of Things	Fifth-generation (5G) mobile phones	Artificial intelligence	Mobile internet	3D printing	3D Metal Printing
Big data analytics	Artificial intelligence	Robotics	Automation of knowledge work	Collaborative economy tools	Artificial Embryos
Artificial intelligence	Robotics	Internet of Things	Internet of Things	Alternative internet delivery	Sensing City
Neuro technologies	Autonomous vehicles	Autonomous vehicles	Cloud technology	Internet of Things	Artificial intelligence for Everybody
Nano/micro satellites	Internet of Things	3D printing	Advanced robotics	Unmanned aerial vehicles/drones	Dueling Neural Networks
Nanomaterials	3D printing	Nanotechnology	Autonomous and near-autonomous vehicles	Airships	Babel-Fish Earbuds
3D printing (additive manufacturing)		Biotechnology	Next-generation genomics	Solar desalination	Zero-Carbon Natural Gas
Advanced energy storage technologies		Materials science	Energy storage	Atmospheric water condensers	Perfect Online Privacy
Synthetic biology		Energy storage	3D printing	Household-scale batteries	Genetic fortune-telling
Blockchain		Quantum computing	Advanced materials	Smog-reducing technologies	Materials' Quantum Leap
			Advanced oil and gas exploration		
			Renewable energy		

# 1.3. Potential Impacts of FIRE

## Sustainable Development Goals (SDGs)

SDG	APPLICATIONS
Agriculture (SDGs 1, 2, 5, 8, 10 and 12)	Recent advances in image recognition allowed researchers to scan more than 50,000 photos of plants to help identify crop diseases at sites using smartphones with a success rate of over 99 per cent
Healthcare (Goal 3)	AI applications have been developed that substitute and complement highly educated and expensive expertise by analyzing medical images. 3D printing produce patient specific prosthetics, orthotic braces and customized medical implants.
Environment and climate (Goal 13)	AI and deep learning can help climate researchers and innovators test out their theories and solutions as to how to reduce air pollution

ESCAP (2018)

# 1.3. Potential Impacts of FIRE (cont'd)

## Likely Unintended Consequences

	Economic Implications	Socio-Cultural Implications	Political & Security Implications
Robotics and AI	<ul style="list-style-type: none"> <li>• Technological unemployment</li> <li>• Income Inequality</li> <li>• Disruption of traditional business models and global value chains</li> </ul>	<ul style="list-style-type: none"> <li>• Rise of monopolies and oligopolies</li> </ul>	<ul style="list-style-type: none"> <li>• Political polarization</li> <li>• Instability</li> <li>• Data and access security risks to automation</li> <li>• Espionage, Terrorism, Autonomous warfare</li> </ul>
IOT	<ul style="list-style-type: none"> <li>• Disruption of traditional business models</li> </ul>	<ul style="list-style-type: none"> <li>• Erosion of personal privacy</li> </ul>	<ul style="list-style-type: none"> <li>• Lack of trust in institutions</li> <li>• Cybersecurity problems</li> <li>• Data fraud</li> </ul>
3D-printing	<ul style="list-style-type: none"> <li>• Disruption of existing business processes</li> </ul>		<ul style="list-style-type: none"> <li>• Weapons proliferation</li> <li>• Cyber-sabotage</li> </ul>

## Share of wage and salaried employment in key **manufacturing** subsectors at high risk of automation (per cent).

Manufacturing

ILO (2016)

Acc to ILO, in the Philippines:

- nearly half (49%) of wage workers (males: 44%, females : 52%) face a high probability of getting affected by automation
- those working as fishery labourers (580,000), waiters (574,000), carpenters (525,000) and office cleaners (463,000) face a high potential of automation
- around 89 per cent of salaried workers in BPO sector fall into the high risk category of automation

## 1.3. Potential Impacts of FIRE (cont'd)

The Fourth Industrial Revolution will trigger selective reshoring, nearshoring and other structural changes to global value chains (WEF 2018, ILO 2016)

Cloud computing and software automation are disruptive technologies.

**SOFTWARE AUTOMATION** forms the greatest risk to workers in the Philippines working in call centres

Software automation can reduce costs by

**40-75%**

for BPO clients

**Sewbots**  
enable production reshoring

The United States sees immediate savings from sewbots if purchased in 2016

**Savings of US\$180,000**

can be seen over 5 years

Women make up **59%** of the Philippines' BPO workforce

The female share of **TCF employment exceeds 70%** in Cambodia, Lao PDR, the Philippines, Thailand and Viet Nam

## 1.3. Potential Impacts of FIRE (cont'd)

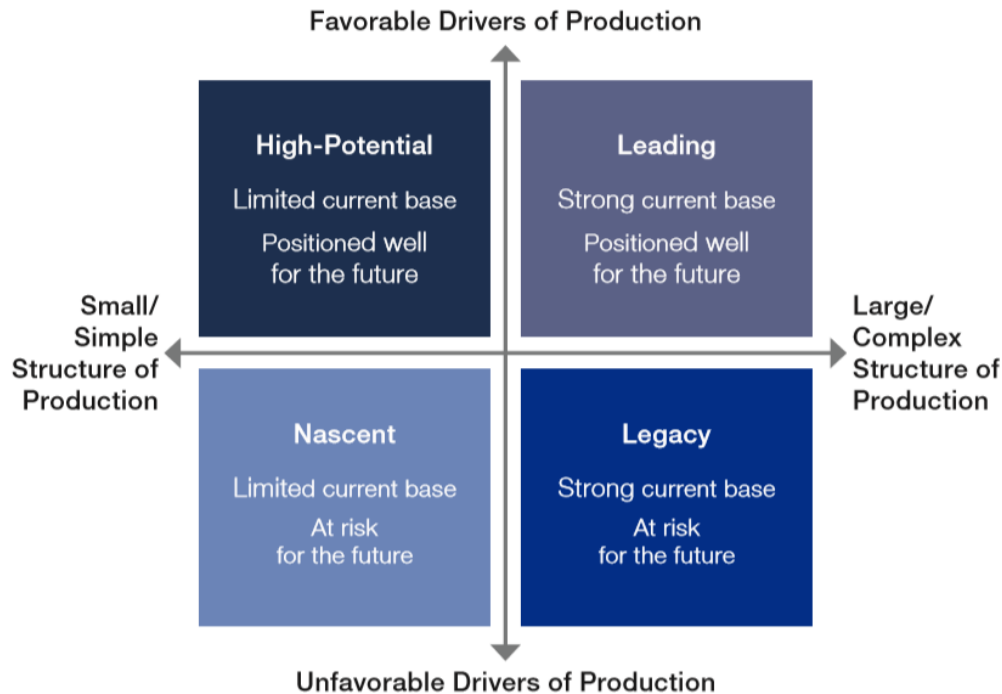

### Automation and The Future of Jobs

- Autor (2015) argues that **extent of machine substitution** for jobs tend to be **overstated** by ignoring strong complementarities which increase productivity, raise earnings and augment demand for labor
- Autor adds that **even if automation does not reduce quantity of jobs, it may affect the qualities of jobs that are available**
- Policy implication: **human capital investments** must be at the **heart of any long-term strategy** on preparation for impact of technology on jobs

# 2. Innovation Ecosystem

## 2.1. WEF Assessment on Preparations

### Country Archetypes

**Note:** Average performance of the top 75 countries (weighted average driver score, weighted average structure score) is at the intersection of the four quadrants to create the archetype borders.

WEF (2017)

The seven ASEAN countries are spread across three different archetypes: **Leading**— Malaysia and Singapore; **Legacy**— Philippines and Thailand; and **Nascent**— Cambodia, Indonesia and Viet Nam.

**Legacy country** - has a strong production base today, but it is at risk for the future due to weaker performance across drivers of production, which include technology and innovation, human capital, global trade and investment, institutional framework, sustainable resources, and the demand environment.

## 2.2. Statistics on Innovation in PH

- Innovation is widely regarded as a major driver of economic output, productivity and competitiveness ... but not all firms innovate

Indicator	PHILIPPINES			ALL COUNTRIES
	2009 SIA	2015 PIDS	2015 WORLD BANK ENTERPRISE SURVEY	
Percent of firms that introduced a new product/service	37.6	30.7	32.9	36.6
Percent of firms that introduced a process innovation	43.9	30.6	40.9	34.2
Percent of firms that spend on R&D	40.3	26.7	21.9	16.9

## 2.2. Statistics on Innovation in PH (cont'd)

### Global Innovation Index (GII), Global Competitiveness Index (GCI), and Existing Competition Policy

ASEAN Member State	2017 GII Ranking	2016 GII Ranking	2017 GCI Ranking	2016 GCI Ranking	Existing Competition Policy
Singapore	7 <sup>th</sup>	6 <sup>th</sup>	3 <sup>rd</sup>	2 <sup>nd</sup>	Competition Act 2004
Malaysia	37 <sup>th</sup>	35 <sup>th</sup>	23 <sup>rd</sup>	25 <sup>th</sup>	Competition Act 2010
Thailand	51 <sup>st</sup>	52 <sup>nd</sup>	32 <sup>nd</sup>	34 <sup>th</sup>	Trade Competition Act 1999
Viet Nam	47 <sup>th</sup>	59 <sup>th</sup>	55 <sup>th</sup>	60 <sup>th</sup>	Competition Law 2004
<b>Philippines</b>	<b>73<sup>rd</sup></b>	<b>74<sup>th</sup></b>	<b>56<sup>th</sup></b>	<b>57<sup>th</sup></b>	<b>Phil Competition Act 2015</b>
Indonesia	87 <sup>th</sup>	88 <sup>th</sup>	36 <sup>th</sup>	41 <sup>st</sup>	Law Number 5 Year 1999 on the Prohibition of Monopolistic Practices and Unfair Business Competition
Cambodia	101 <sup>st</sup>	95 <sup>th</sup>	94 <sup>th</sup>	89 <sup>th</sup>	<b>Draft</b> Competition Law 2016

### 3. Gardening innovation

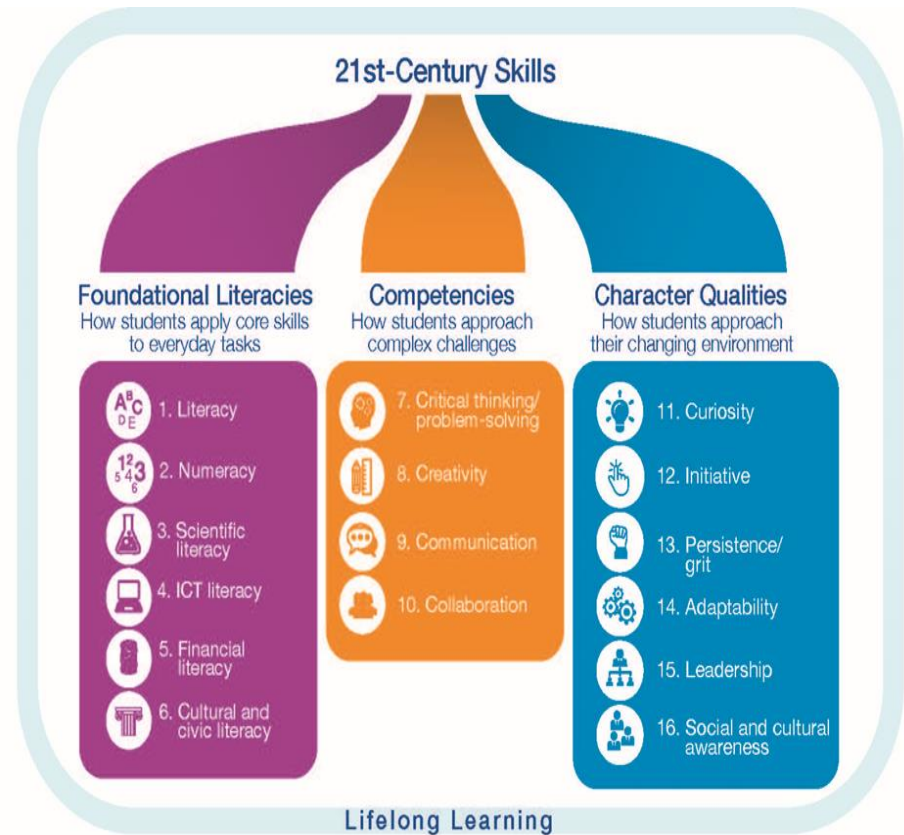

---

Source: World Bank (2010)

# 3.1. Preparing the ground (Education)

- Skills and competencies developed in school should be like LEGO blocks which can be used to create different figures using the same building blocks
- Need for lifelong learning, continuous training and retraining; the only way to keep up is to continuously learn, unlearn, and re-learn
  - A key skill is “learning how to learn.”
- Pedagogy should go beyond transmitting knowledge into encouraging reconstruction of knowledge

Source: WEF (2015)

## 3.2. Nurturing soil (Research)

The bulk (60%) of R&D spending across sectors is actually supported by government (Albert *et al.*, 2015).

While the Philippines has had a slight increase in R&D expenditure to GDP in recent years, this spending is still at less than a fifth of one percent of GDP, which is below the one percent benchmark recommended by UNESCO.

The country's share of spending in GDP also falls below spending of several ASEAN member states, especially Singapore (2.4 %) and Malaysia (1.3 %), and even including Thailand (0.5 %) and Viet Nam (0.2 %).

## 3.3. Watering Ground (Finance, Support to Innovation)

- DTI, DOST and CHED working in tandem on Inclusive Innovation Industry Strategy (“i3S”)
- DOST programs to boost innovation support
  - Science for Change Program (S4CP)
  - Balik Scientist 2.0
  - SETUP
- DICT
  - Addressing Issues on coverage, price and quality of internet
  - formulating successor to Philippines Digital Strategy 2011-2015, developed National Broadband Plan e-Government Master Plan 2016-2020 (EGMP 2.0),
  - established GovCloud

# 3.3. Watering (Finance, Support to Innovation) (cont'd)

CAUTION: Returns to R&D Trace an Inverted U-Shape across the Dev't Process

Source: Goñi and Maloney 2017.

Note: Graph uses quinquennials of cross-country data from 1960 to 2010 to estimate the rates of return to research and development (R&D) across the development process: 0 is the frontier, and moving left represents progressively less developed countries.

- ROI on Innovation/R&D Spending rate of return begins to fall and may even be negative for quite poor countries
- Explanation: when countries are far from the technological frontier, the potential gains from “catch-up” increases but when stock of complementarity factors (human capital, firm and management capabilities, financial markets) are missing, returns will be low
- Issues about absorptive capacity

SOURCE: [Innovation Paradox](#)

## 3.4. Removing Weeds (Competition, Deregulation)

- In the most recent *Doing Business 2018* (2018) report, the Philippines ranking slipped from 99<sup>th</sup> in 2017 to 113<sup>th</sup> behind Vietnam and Indonesia at 68<sup>th</sup> and 72<sup>nd</sup>, respectively. Among the indicators, the Philippines was ranked lowest in “starting a business”
- According to the OECD (2016), foreign direct investment (FDI) restrictions in the Philippines are high by both regional and global standards. Based on OECD FDI Regulatory Restrictiveness Index, the Philippines is the most restrictive economy among the 62 OECD and non-OECD countries included in the database. Compared to other countries (e.g. China, Vietnam, India, Indonesia, and Malaysia) the regulatory environment for FDI in the Philippines has not changed much in the last 20 years.

## 3.5. Other challenges and issues

- Responsive and adaptive regulation
  - Regulatory sandbox
  - “Whole of Government”
- Labor market and social protection
  - Flexible and forward-looking labor market
  - Strengthening social protection systems: progressive universalism and portable social protection systems
  - Universal basic income (???)
- Taxation reform/upgrade (???) : : improve collection of real property tax, provision of excise taxes on sugar, tobacco and alcohol, subsidy reforms, reducing tax avoidance.
- Whole of Nation Paradigm and Action Agenda
