The Beauty of CBMS

- Source of information for disaster risk reduction planning and disaster response.
- A tool in identifying vulnerable groups and casualties of natural disasters.
- Ground work for evidence based plans and programs on socio-economic situations, hazards, societal vulnerability and poverty diagnosis.

CBMS seeks to address the existing data gaps at the local level, determining the causes of poverty, formulating appropriate policies and program, identifying eligible beneficiaries and assessing impact of policies and programs.

Indeed, CBMS has several features that enhance the capacity of local governments in detecting and reducing poverty.

"By failing to prepare,
you are preparing to fail."

– Benjamin Franklin

THANK YOU! STAY SAFE AND HEALTHY!
