

*4th Annual Public Policy Conference
Philippine Institute for Development Studies
September 19, 2018, Mandaluyong, Metro Manila*

Facing the FIRe with WAATER

M. Victoria Carpio-Bernido

* Research Center for Theoretical Physics
Central Visayan Institute Foundation, Jagna, Bohol

* University of San Carlos, Cebu City

* Mindanao State University – Iligan Institute of Technology
Iligan City

CONTEXT (APPC)

Workers with less education and fewer skills are likely to be at a disadvantage as the FIRE progresses...need to adapt to the changing nature of work by making investments in training people to have both soft skills and technical competencies.

QUESTIONS

- What critical policy decisions and strategic actions should the country be taking today to get the current and future work force ready for FIRe?

QUESTIONS

- What can (and should) be done so that Filipino workers and the young who are now lagging behind in human capital development are able to catch up and move ahead amidst labor market challenges and opportunities?

KEY POINTS

➤ Critical Choices:

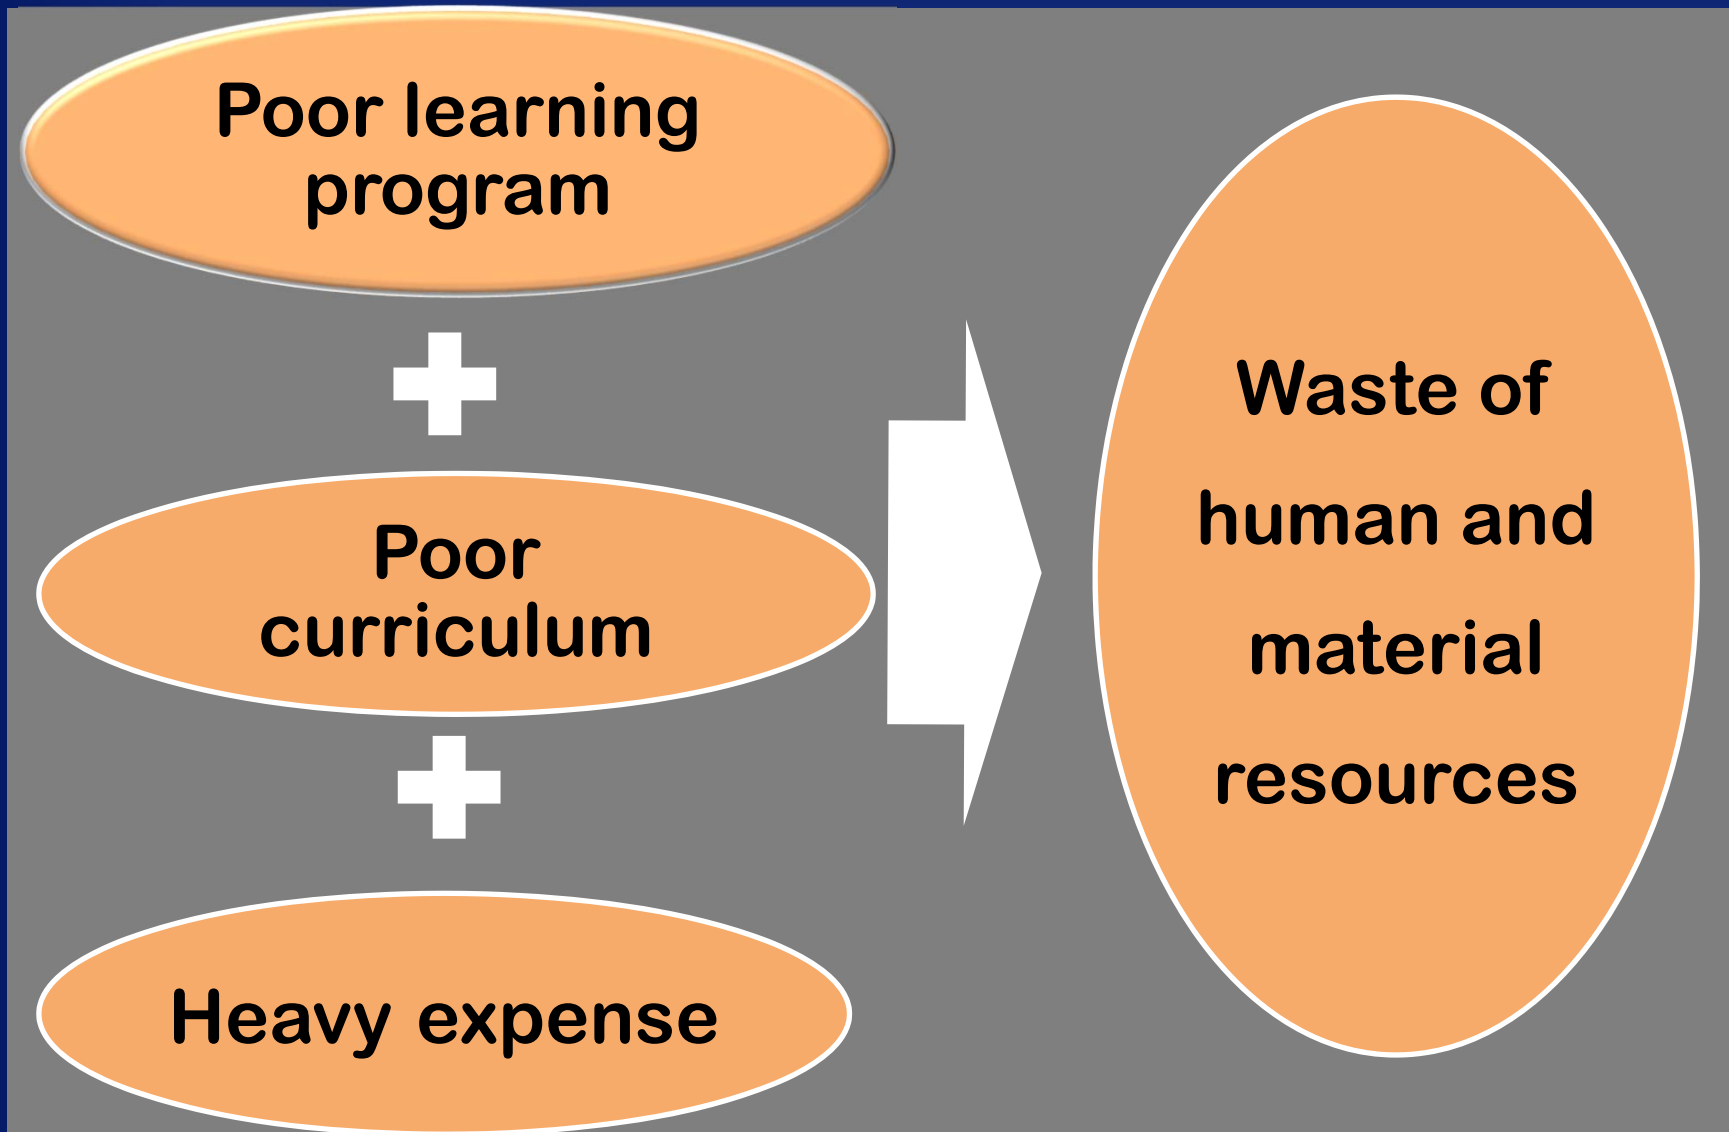

- Curriculum content and depth
- Learning program and materials
- Budget optimization

➤ WAATER:

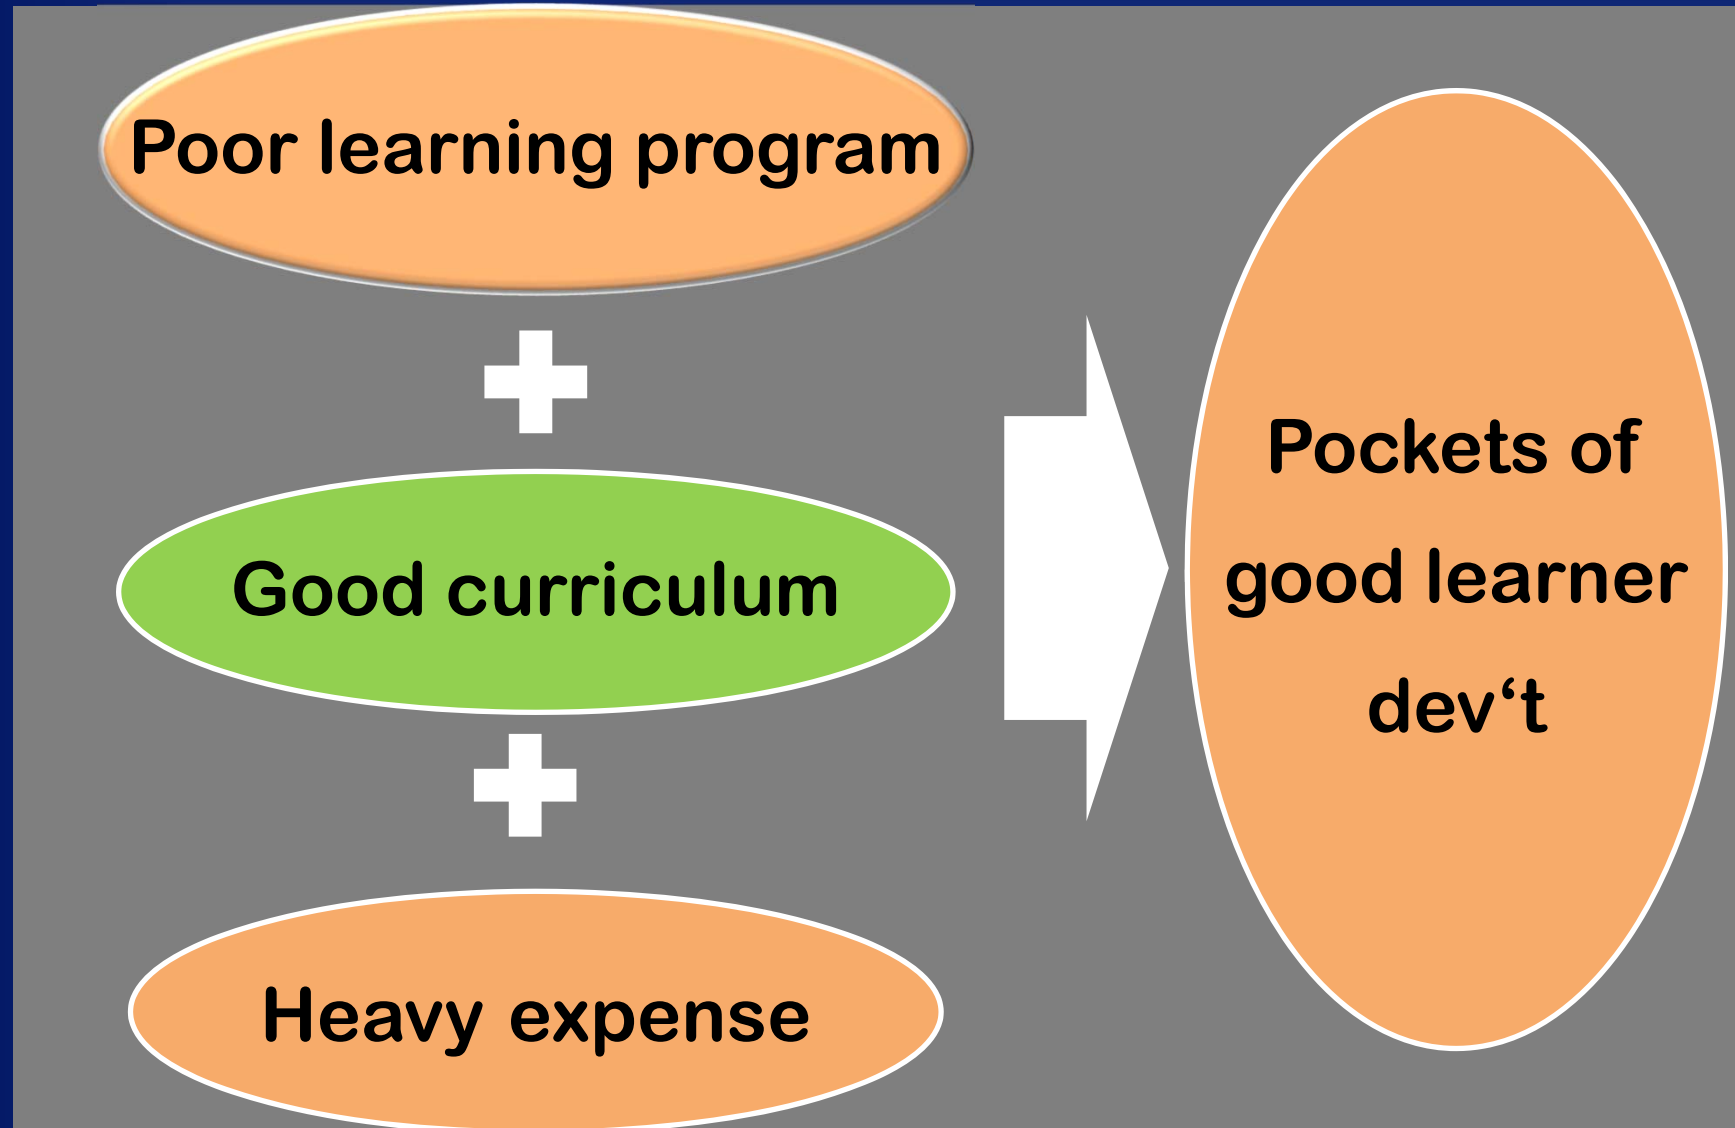

Wide-ranging **A**dvanced **A**alytics
Training and **E**ducation **R**einforcement

- Prototype: The CVIF Experience

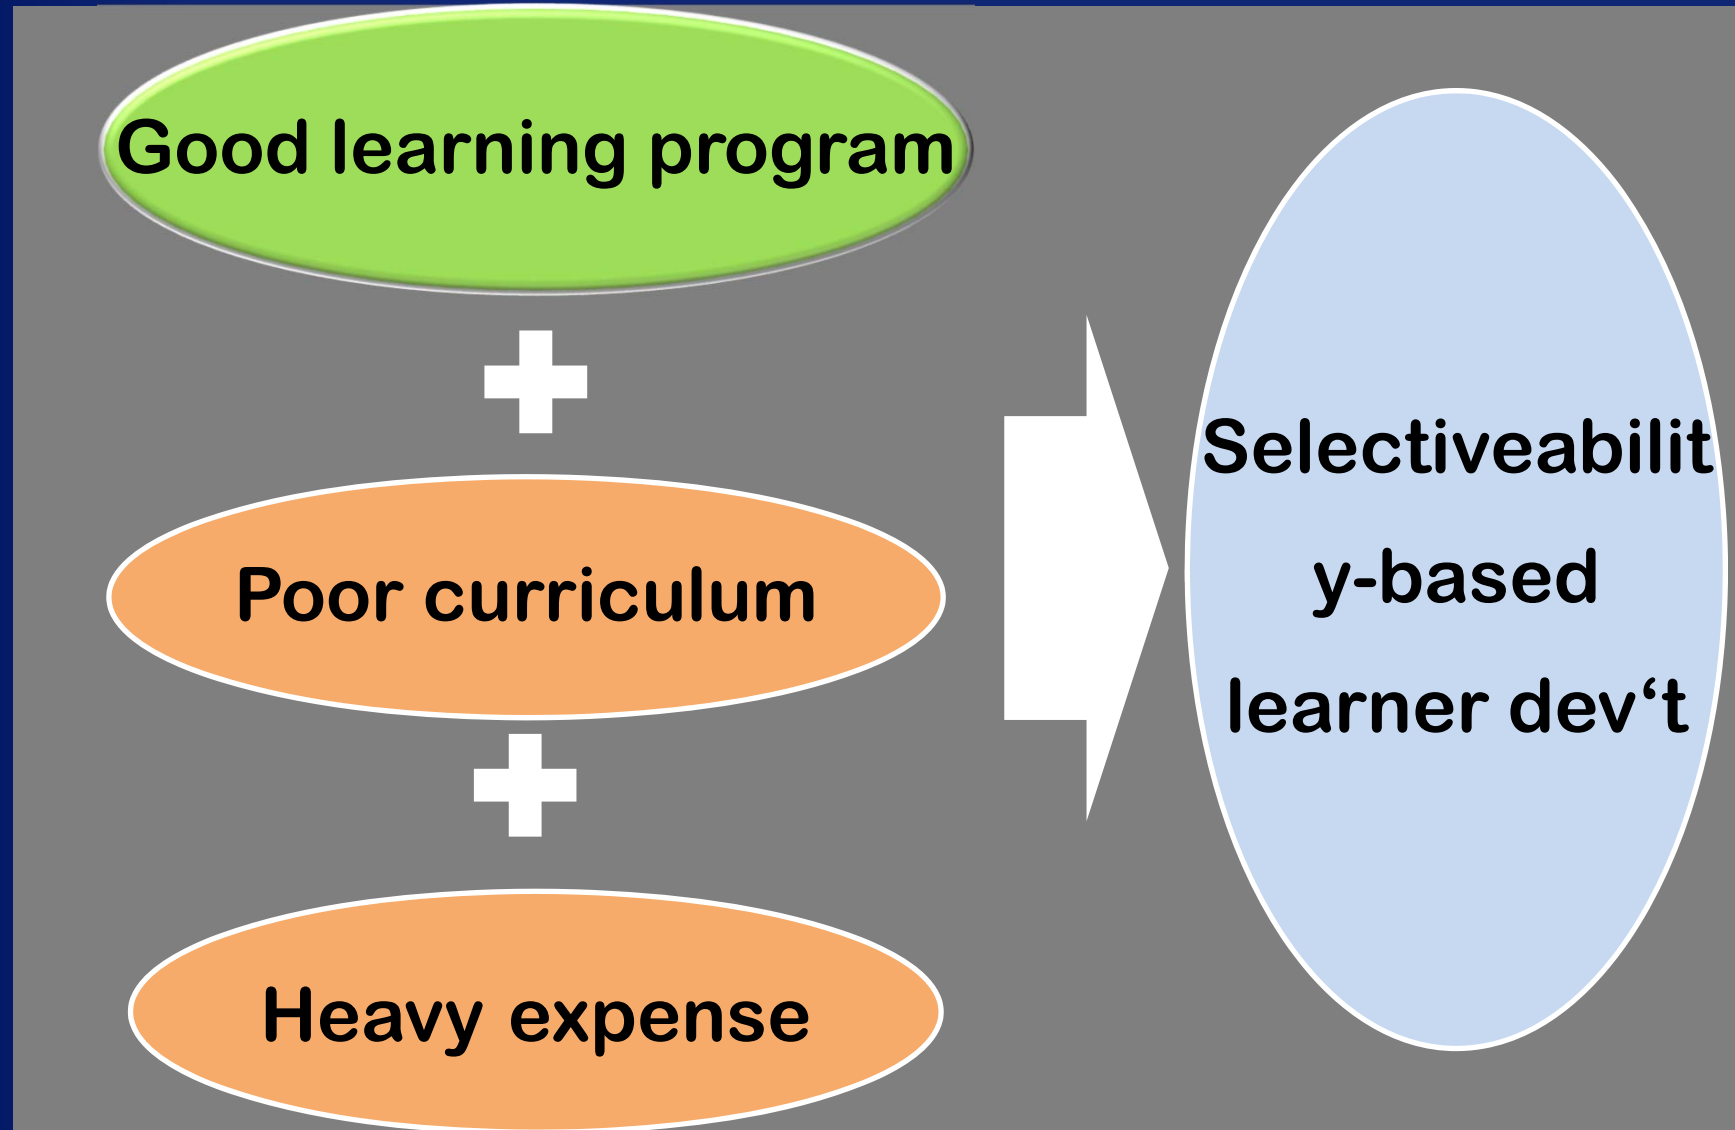

Critical choices

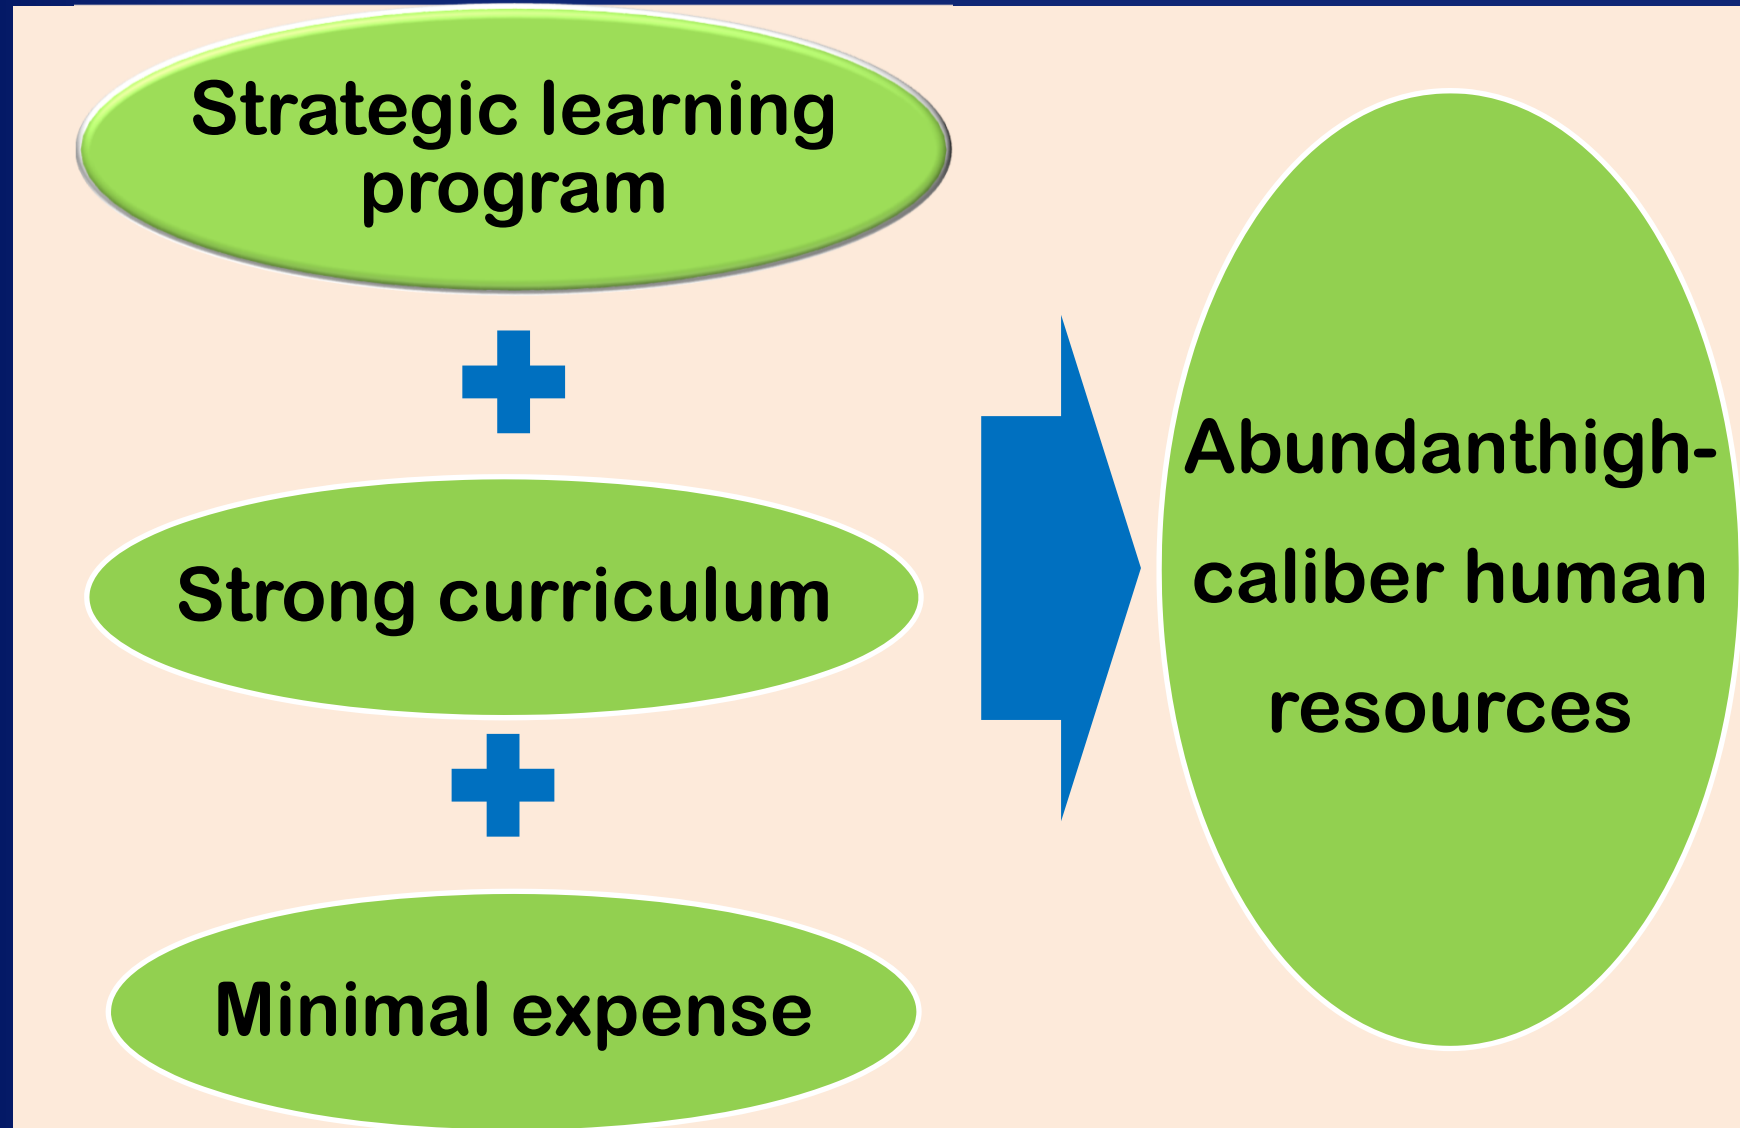

Critical choices

Critical choices

Critical choices

WAATER:

Wide-ranging Advanced
Analytics Training and
Education Reinforcement

Wide-ranging

Wide-ranging

- Extensive in scope
 - Demographical and anthropological distribution
 - Disciplines for long-haul training
 - Transnational

Addressing the whole spectrum:

Secondary Schools Enrollment SY 2013-2014

1,397,941

Public

Private

5,773,267

TOTAL: 7,171,208

http://www.nscb.gov.ph/secstat/d_educ.asp

Common problems

- Boosting interest in science, technology, engineering and math (STEM) courses
- Sustaining interest and passing grades throughout a university course
- Patching up deficiencies in mathematical preparation

*The gap between
the rich and
the poor*

Ang mayayaman

Ang mabuti-buti

The CVIF Dynamic Learning Program

- a systems approach to process-induced learning
- applied at the elementary, secondary, and tertiary levels

Carpio-Bernido, M. V., Bernido, C. C. (2004) *Science Culture and Education for Change, Part I: Innovative Strategies for Secondary Education in the Philippines*. In Transactions of the National Academy of Science and Technology (NAST), Philippines, Vol. 26, No. 2; (2011) *CVIF Dynamic Learning Program: A Systems Approach to Process-Induced Learning*. In Proc. of the epiSTEME 4 (Mumbai:Homi Bhabha Center for Science Education).

CVIF Program Design Requirements

- *large-scale* enough for *state school systems*, but *individualized* enough for *each student in any school*
- has best *evidence-based features*, for curriculum and didactics
- so low in *cost* that effective implementation is possible for *any nation*.

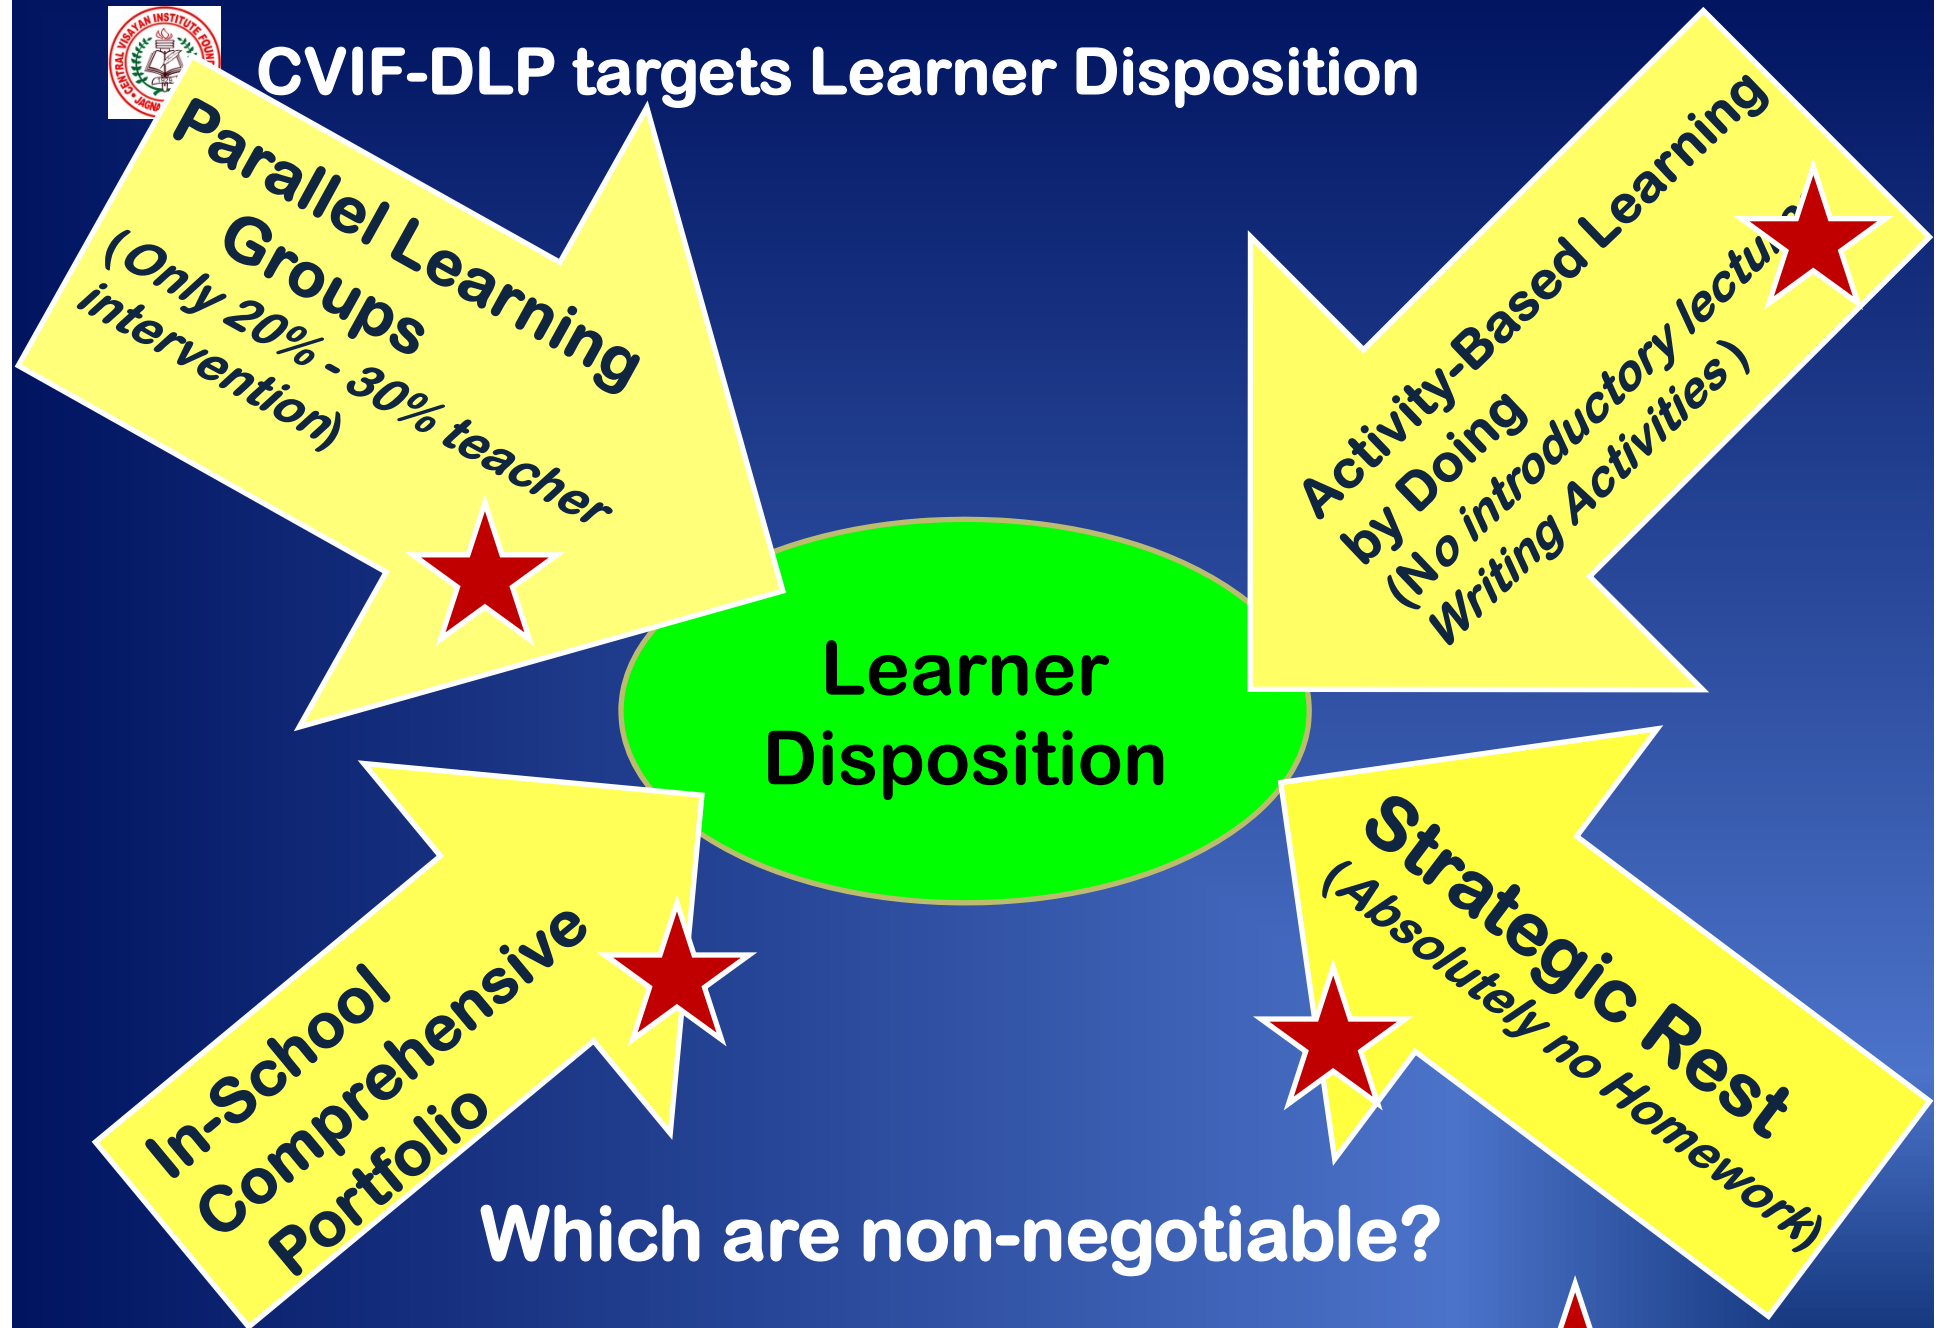

Ford's Model T: iconic disruptive showcase; Key: Process Efficiency

"1908 Ford Model T" by User Rmhermen on en.wikipedia (1908 Ford Model T ad from Oct. 1, 1908 Life magazine).

CVIF-DLP targets Learner Disposition

Which are non-negotiable?

Non-negotiable Features of DLP=

- No need for homework, assignments, required research, and projects to be done at home
- No need for tutoring after school hours
- More time for holistic development

Activity Title: Exercise in Drawing Vectors I
Learning Targets: To draw a vector directed at any angle between the North, South, East and Westward directions.
Reference: Title LPON PIP Part I
Author C. Bernido Ph.D. and M.C. Bernido Ph.D. Page Numbers 37

For angles of vectors between the meteorological directions, we often use a simple rule. For example, take 30° North of East. This means from the East turn 30° upward to the North.

in the spinning motion of the washing machine so that only water from the clothes.

Application

1. CDS games children play where the centripetal effect is experienced.
2. Why is it dangerous to drive at high speeds on curved roads especially on rainy days?

Answers:

- 1) a. Avalanch (playing using the ~~avalanch~~ wheel)
- b. goyo (playing using the goyo)

2) It is very dangerous to drive at high speeds on curved roads especially on rainy days, because during these times, the roads will be slippery due to reduced friction. The rain will serve as lubricant, therefore, there will be no friction. If the driver drives at high speeds on wet roads, the centripetal force may not be enough to balance the high amount of centrifugal force because the road is now frictionless. It will now then result into road accidents. The driver cannot anymore control the steering wheel.

☒ Skills / Exercise / Drill ☐ Drawing / Art ☐ Informal Theme

Activity Title: Centripetal Acceleration - Derivation (Part I - Change in Velocity)
 Learning Targets: To apply vector subtraction for the change in velocity in uniform circular motion.
 Reference Title: LPON - PTP 1
 Author: C.C. Bernido, Ph.D. and M.V.C. Bernido Page Numbers: 87

Let us look at the top view of the circular path, and draw the velocity vectors and position vectors of the object at two different points of its path. Recall that the velocity vector is always tangent to the circle, while the position vector, relative to the center of the circle, is always along a radius of the circle.

We can see the change in velocity by putting the velocity vectors together. Applying vector subtraction, we have,

$$\Delta \vec{v} = \vec{v}_2 - \vec{v}_1$$

Application

1. The diagram at the right shows the side view of two media and their interface. Draw and label rays for incident, reflected, and transmitted waves.

2. Give examples of different media with an interface through which a wave propagates.

SIDE VIEW

ANSWERS:

2) • Duplex house.

Medium 1: Room 1
Medium 2: Room 2
Interface: Wall that divides them

• Ham Sandwich

Medium 1: Leaf 1
Medium 2: Leaf 2
Interface: Ham

**Success Indicators of CVIF-DLP
in Davao Christian High School**

International Benchmarking

- SAT 2009 math scores of marker student within cut-off of good American universities (*Math 660*)

CVIF Alumna

Jesha Caseñas (CVIF 2005)
graduated B.S.
Anthropology from
University of California
(UC), Berkeley

*Note: 22 Nobel Prizes have been
awarded to UC Berkeley
faculty.*

CVIF Alumnus

Ronald Lloren (*CVIF 2005*): doing Ph.D. (Marine Sciences) at ETH Zurich (Swiss Federal Institute) .

ETH Zurich is number One in the world in Earth and Marine Sciences (2018 QS World Ranking of Universities by discipline).

Albert Einstein studied and taught at ETH.

21 Nobel Prizes so far for ETH Zurich.

CVIF Alumnus

Ronald Lloren (*CVIF 2005*): Ph.D. (Marine Science)
candidate at ETH Zurich (Swiss Federal Institute) .

- First year marks on written comprehensive exams: 5/6, 5/6, 6/6
- Accepted to the competitive (30/103) summer institute funded by the US National Science Foundation:
"Your application stood out as excellent because of its thoughtfulness, detail, and specificity..."

CVIF Alumna

Madelynn Nayga (CVIF 2009) in Ph.D. (Physics) joint program at Max Planck Institute (MPI) and University of Dresden, Germany. Max Planck Institute programs are highly competitive.

Ms. Nayga topped the 2017 Condensed Matter Physics post-masteral 10-month Diploma Class at the International Centre for Theoretical Physics, Trieste, Italy.

The choice of a **good educational program** allows large cohorts of students to reach globally competitive levels of achievement.

Workshop on COMPUTATIONAL METHODS IN BIOLOGY

October 5 - 6, 2018

Central Visayan Institute Foundation

Jagna, Bohol 6308, Philippines

- Basic programming in Python and TensorFlow
- Artificial intelligence in Biology
- Using computers to study evolution
- Big data in Biology

LECTURERS

Dr. Hyunjin Shim (*Biotechnology and Bioengineering, École Polytechnique Fédéral de Lausanne, Switzerland*) Dr. Shim is a computational biologist at the interface of Genetics and Machine Learning and was previously a researcher at the Artificial Intelligence Laboratory of Stanford University, USA.

Dr. Victor Sojo (*Evolutionary Biology and Chemistry, University College London, UK*) Dr. Sojo is a fellow of the Institute for Advanced Studies in Berlin. He did postdoctoral work at Ludwig-Maximilian University, Germany, as Research Fellow of the European Molecular Biology Organization and at RIKEN, Tokyo, under the Japan Society for the Promotion of Science program.
