

# AUTOMATION OF COCO-SUGAR PRODUCTION

*January 15, 2016 – February 15, 2017*

*Beneficiary: Ragay Coconut Industry Development Council (RCIDC) Coco-House,  
F. Simeon, Ragay, Camarines Sur*

Philippine  
Coconut  
Authority

## IMPACT OF THE PROJECT TO THE END-USERS

- ✓ Increased production and quality control of the coconut sugar
- ✓ Open business opportunity and livelihood to the coconut farmers
- ✓ Ragay Coconut Industry Development Council (RCIDC) will be known for having the first automated coco sugar production system
- ✓ Developed partnership of the local farmers, LGU, Academe and Industry

# **Vision-Based Artificial Intelligence Analytics Software for Traffic and Transport Application**

## Contactless Apprehension of Traffic Violators on 24-Hour Basis All-Vehicle Detection System (CATCH-ALL)

DLSU - Intelligent Systems Laboratory

Start Up Project Funded by:

Department of Science and Technology - Philippine Council for Industry, Energy, and  
Emerging Technologies for Research and Development (DOST-PCIEERD)

Major Cause of Traffic  
Congestions  
in Metro Manila

Volume-Based Traffic Congestion

Behavior-Based Traffic Congestion

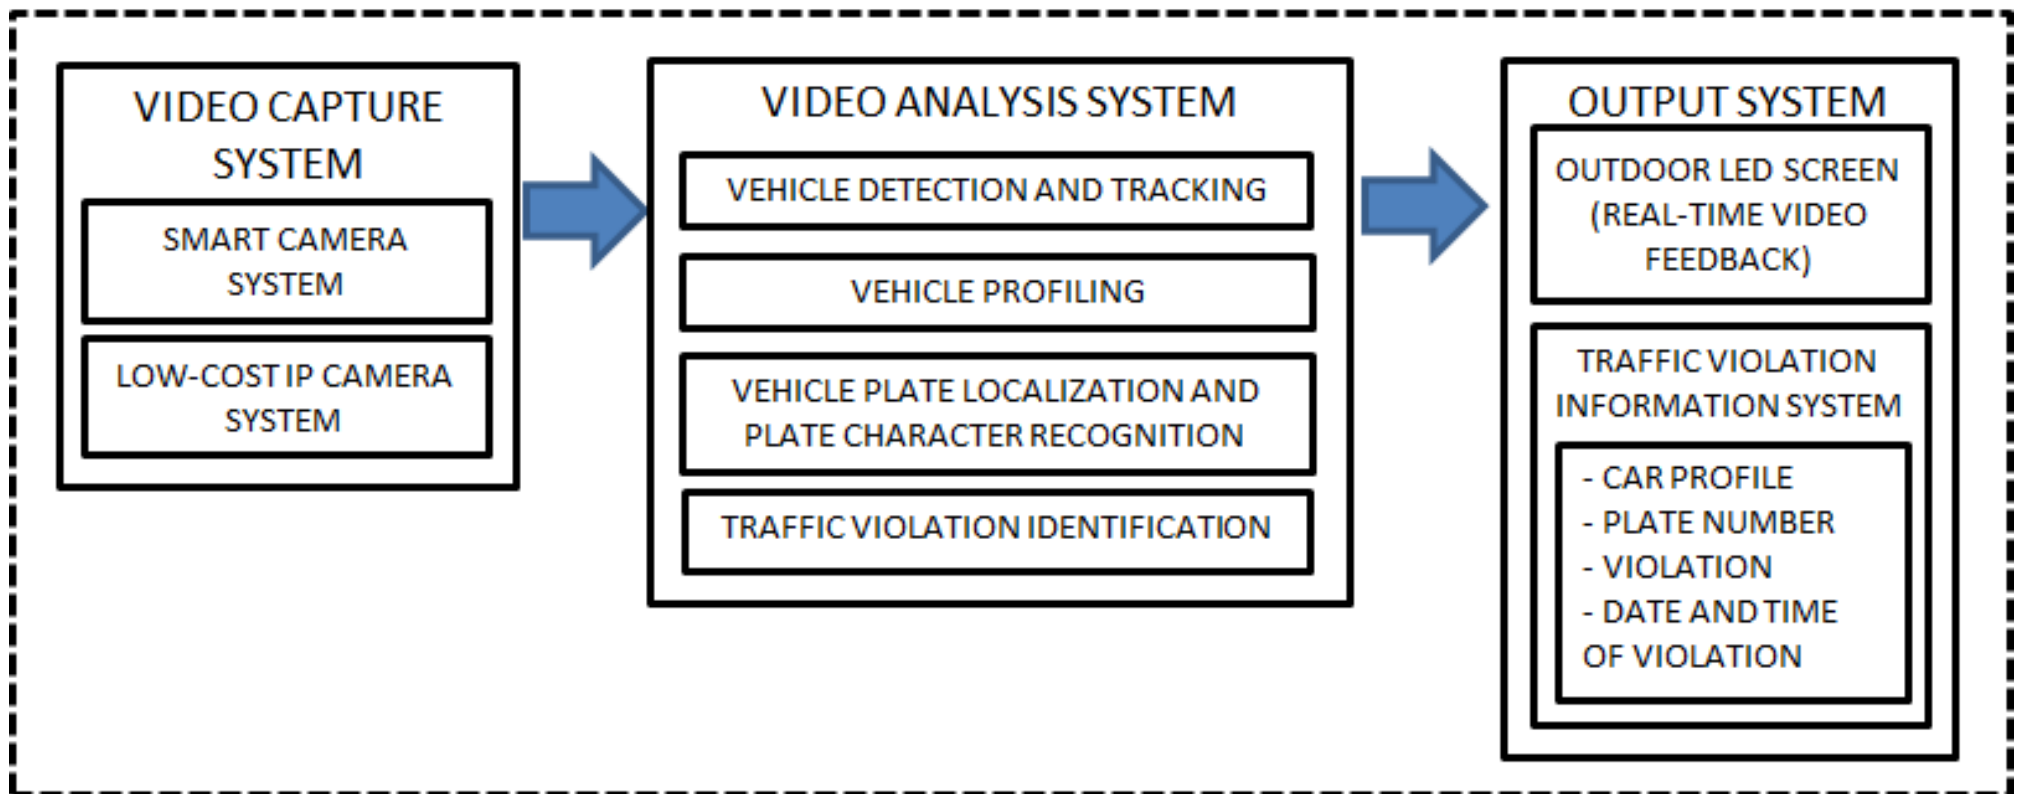

# CATCH-ALL System

- ❖ **CATCH-ALL** is a **vision-based system** that incorporates **artificial intelligence** algorithms used for **vehicle detection, tracking, and identification**, as well as, **traffic violations detection**. It has 3 main sub-systems: video capture, video analytics, and output sub-systems.
  - The **video capture system** is a network of roadside cameras connected to a remote server location.
  - The **video analytics system** is consists of vehicle detection and tracking, license plate localization and recognition, and traffic violations detection algorithms.
  - The **output system** contains the **traffic violations database** and **outdoor LED screen notification system**.

# Product and Services

## ❖ Products and Services

CATCH-ALL system is an integration of vision and machine learning systems that offers better performance in visual monitoring, recording, and evidence gathering tasks.

**Software as a Service (SaaS):** It includes customizable features such as,

- **Vehicle detection and counting system**
- **Vehicle classification system**
- **License plate detection and optical character recognition system**
- **Number coding detection system**
- **User interface application**
- **Reports generation tool (incidence, summary and tracking reports)**

# Product and Services

## SaaS and Data as a Service (DaaS):

- Raw video storage
- Automated database encoding
- Video evidence storage and retrieval

## Outsource Reports Generation:

- **Incidence reports** (vehicle and plate image, time stamp, location, violation)
- **Summary reports** (daily, weekly, monthly)
- **Tracking reports**
  - Validated
  - Sent
  - Settlement (contested, accepted and paid)

# The Product

## Traffic Violations Page

The screenshot displays the 'CATCH-ALL' web application interface. The top navigation bar includes 'Live', 'Traffic Violations' (highlighted with a red box), and 'Reports'. The date and time 'Monday, January 8 2018, 8:47:32 am' are shown on the right. The main content area features a grid of eight video feeds, each showing a traffic scene with a black SUV and a yellow bus. Below each video feed, the license plate is displayed (e.g., 'ACE-1242', 'LGW988') and an 'Encode' button is provided. The first video feed in the second row is highlighted with a red box, and a red arrow points from a text box below to it. At the bottom, there are navigation controls with arrows and page numbers '1' and '2'.

Shows detected cars and license plate captured in the camera vicinity.

# The Product

Shows image of detected license plate.

Shows image of detected car.

Suggestive text box shows possible reading of license plate.

Operator simply clicks encode button to submit traffic violator to database.

# **The Start of Swarm Robotics**

# Swarm Intelligence And Robotics

**Swarm intelligence refers to the set of algorithms**

**Physical demonstration of swarm behavior application of swarm principles to robots is called swarm robotics**

# The Solution

- **Swarming**
  - **Collective behavior of social animals**
    - **Protection from predators**
    - **Searching of food**
    - **Reproduction**
    - **Migration**
  - **Swarm covers more grounds, accomplish more tasks.**
  - **Swarm amplifies the ability of a single member of the swarm**

# Possible Applications

- **Swarm of drones can be used in times of disaster for relief and rescue operations.**
- **Swarm of drones can be used for photography, film and vision related applications**
- **Swarm of drones can be used for crops and environment applications.**
