LIGTAS

Background

Class Suspensions

Current weather-related class suspensions often lack precision, **creating a challenge in balancing student safety with educational continuity.**

Weather events **affect regions differently**, yet decisions are typically made for entire areas.

HEADLINES

Bad weather class suspension policy to be reviewed

Q 0

Department of Education (DepEd) Secretary Sonny Angara on August 13, 2024.

STAR / Ryan Baldemor

MANILA, Philippines — Education Secretary Sonny Angara has ordered a review of the Department of Education (DepEd)'s policy on class suspension during typhoons, saying there must be a balance between ensuring the safety of students and teachers and preventing further increases in the number of school days lost.

Background

Extreme Heat

Extreme heat events are **increasingly disrupting education** in the Philippines, with recent temperature spikes **forcing closures in nearly half of Manila's schools.**

OFFICIAL STATEMENT

ON CLASS SUSPENSIONS AND SHIFTING TO ADM DUE TO HIGH HEAT INDEX, OTHER CALAMITIES

4 April 2024 - In light of the high heat index experienced in different parts of the country, the Department of Education (DepEd) reiterates the provisions of Department Order 037 issued in 2022, which provides guidelines on the cancellation or suspension of classes and work in schools in the event of natural disasters, power outages/power interruptions, and other calamities.

Specifically, DepEd has given the school heads the authority and discretion to suspend the conduct of in-person classes and shift to alternative delivery modes (ADM) in cases of extreme heat and other calamities that may compromise the health and safety of learners, teachers, and non-teaching personnel. This measure was the subject of OASOPS No. 2023-077 issued last 20 April 2023, and OUCT and OUOPS Memorandum dated 28 February 2023 (Implementation of Alternative Delivery Mode (ADM) in All Public Elementary and Secondary Schools).

Given that DepEd sup in the best interest assessments for timely of learners and person Thank you.

Heat wave shuts down schools in nearly half of Manila

LIGTAS (Multi-Hazard Analytics for School Resilience)

To **transform educational resilience** by linking natural hazards with learning outcomes using AI, **enabling targeted interventions**, creating adaptive learning environments that **maintain academic progress despite environmental challenges**.
